PROJECTS

Brews Brothers — This group project is a way to control a refrigerator remotely. After logging into the site with google the user can set up various batches with a temperature schedule. This schedule is sent to the refrigerator and run for the set amount of time.

Technical–Angular, Express, Node, Mongo, Postgres, OAuth, Bootstrap, Raspberry Pi, Git, Travis

Git Up — Git up is a web application designed for parents. The parents can set goals and rewards for their children and then update their goals.

Technical–Express, Node, Postgres, OAuth, Bootstrap, JQuery, Knex

Movie Picker — A game which lets users choose which movie they think has the highest IMDB score. This was my first project

Technical–HTML5, CSS, JQuery, AJAX
